

Compact and Silent at an unbeatable Price

The new POSEIDON EDITION PE-MVE – huge performance at a great price

PE 250-MVE with P 42 Purification System
and B-SECURUS filter cartridge monitoring

The filter housing and the optional B-TIMER filter cartridge lifetime calculation or SECURUS filter cartridge monitoring system as well as the condensate vessel are mounted on the front of the housing so that maintenance can be performed easily.

As with the MINI-VERTICUS III, the compressor block is very easy to access thanks to removable doors on both sides.

In the most powerful design, the PE-MVE delivers a huge 300 l/min despite its compact size. It is also available in a version for 250 l/min.

Delivery time is at the beginning about 8-10 weeks.

When it came to selecting a sound-insulated breathing air compressor with a minimal footprint that also provided excellent charging rates, the MINI-VERTICUS III from BAUER was previously the first port of call. Now, with the new POSEIDON EDITION PE-MVE model, an extremely attractive alternative – particularly when considered from a price perspective – is about to hit the market!

This has been achieved thanks to a redesign that took into account customers' requests for a model offering BAUER's customary high level of quality but incorporating fewer equipment details – enabling it to be supplied at a particularly attractive price.

The unit is operated via a semi-automatic compressor control, a fully automatic control is available as well as an option. This makes it ideal for standalone operation and situations where the extensive control and monitoring options provided by the B-CONTROL MICRO are not required.
